

ANDREA JUHÁSZ FUNCTION

I represent in an interesting experiment. I created objects with mathematical functions. My base unit of choice is the discs invented in my multiverse installation. Here I have experimented with what functions create interconnected, aesthetically pleasing forms. I rendered these using python programming with 3d software.

ANDREA JUHÁSZ

MULTIVERSE

I'm also talking a little bit about another project a specific installation. The title is „Multiverse” for this I would suspend a multitude of plates patterned on two sides. Gleaming Lights of the Souls by Yayoi Kusama installation made a big impression on me. I pretty much imagine the execution the way she had it in the Louisiana museum in Denmark.

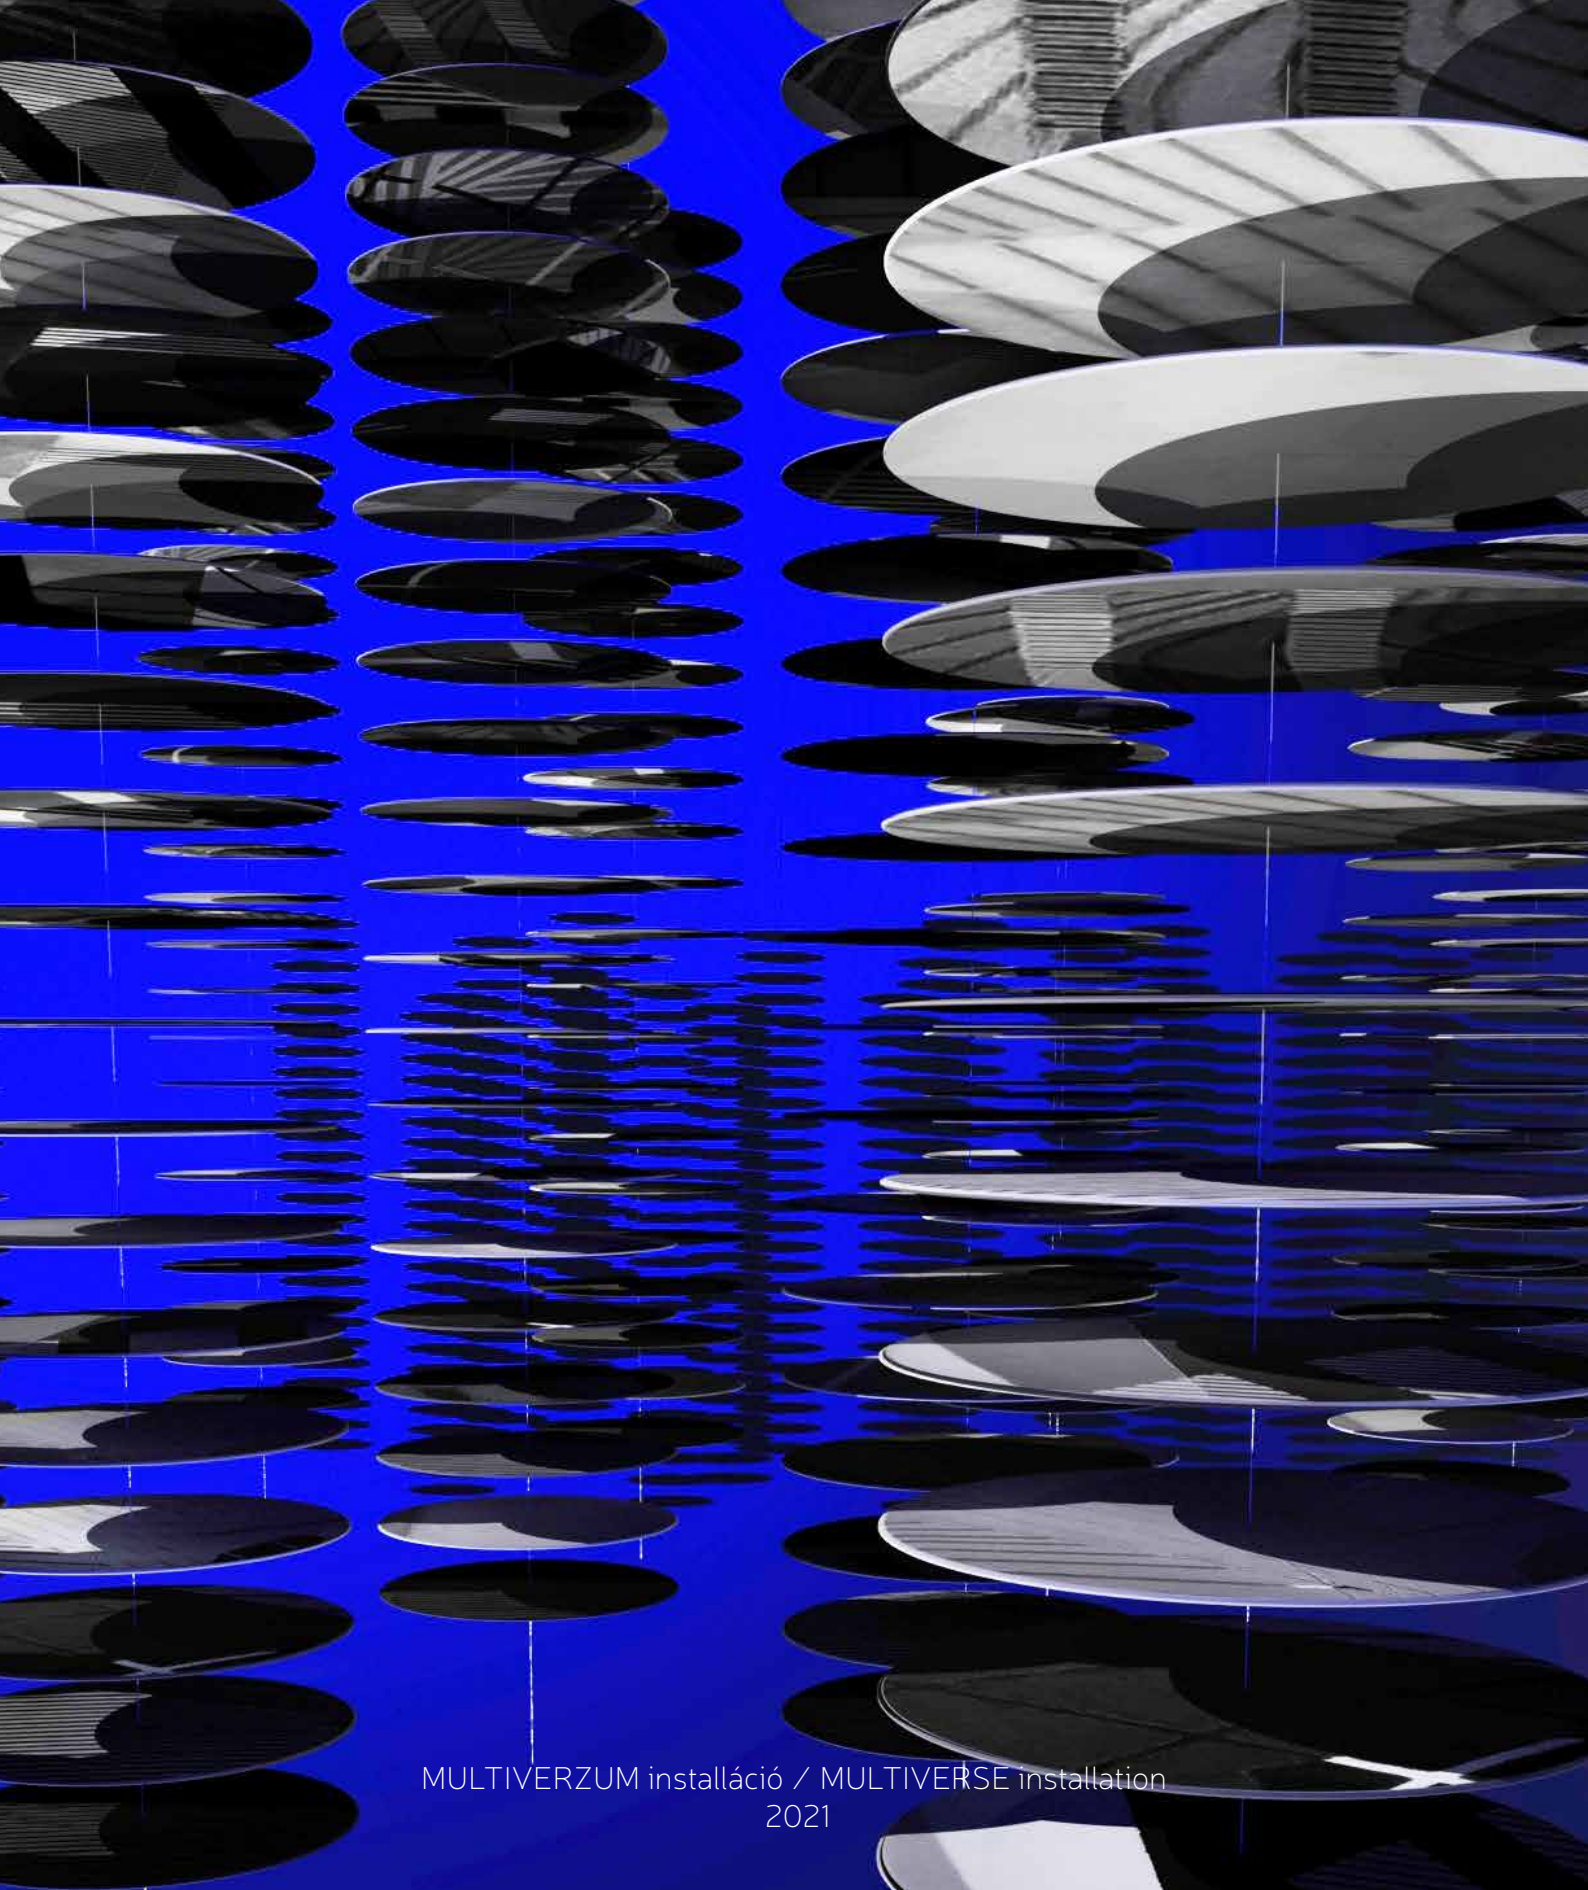

The graphic transcript is made of my paintings, which is printed on a transparent foil. These I use it as a tool for painting with light. A multitude of discs are 30 cm in diameter. I coat them on two sides with photoemulsion and make a photogram on them in a darkroom. When they're done, I string them up like a column on a steel wire so that approx. 3 m height. I hang these columns and illuminate them with lights me.

As a preparation, I designed and printed graphics on transparent foils. I didn't make a maquette, but just a 3D visual design. I based many discs, I'm in the process here then I'm going to apply these with a photo emulsion and make a photogram on it. The multitude of discs thus produced creates suspended cylinders.

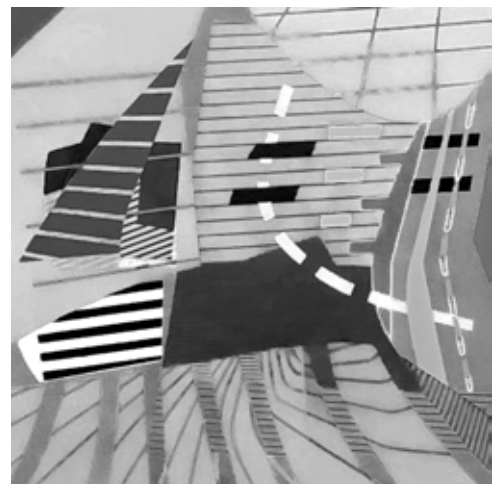

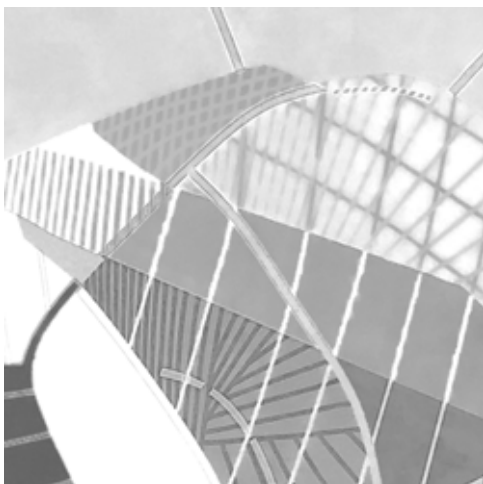

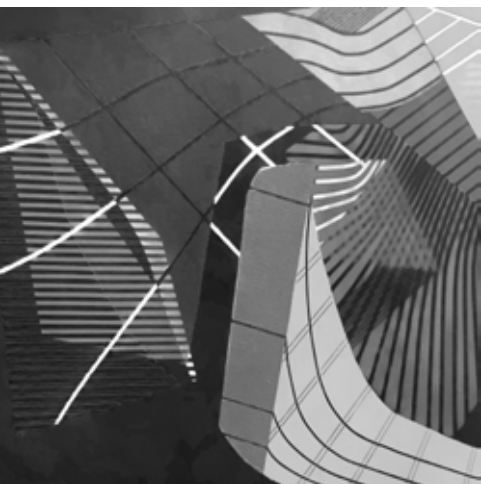

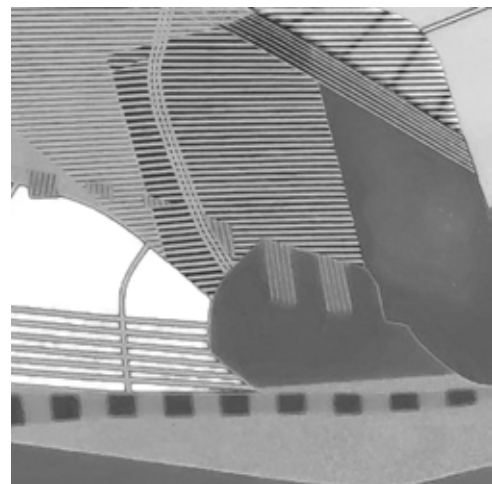

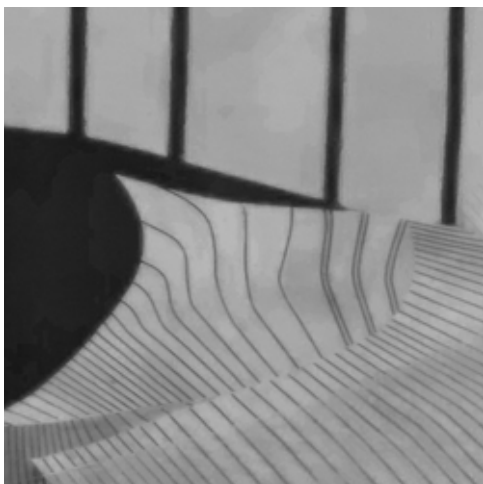

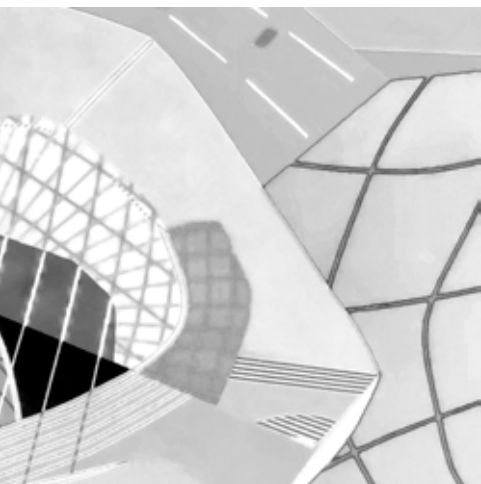

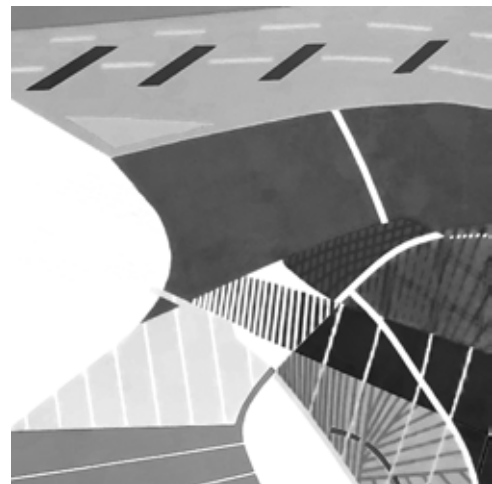

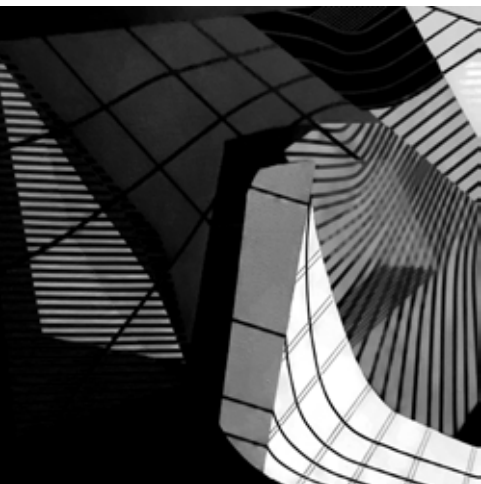

When I was planning I thought about the size. This only has an effect in a large white cube space. I am looking for a tender to create and exhibit this.
